Constructing Cadians

Before assembling the models ensure that the parts are neatly trimmed and cleaned. Gluing the legs to the base first gives a good starting point. We recommend that you Bluetack the model in the pose you would like first before attempting to glue the model together.

TIP: Heating areas of the model such as the collar or arms with hot air or water can soften those parts allowing additional reposing of the model.

NOTE: The arms sets on sprues T are paired as indicated Arm (T3) is not required. Torso (A1) has a forward lean and works particularly well on the running Legs (E3) or with the aiming arms (T1a and 1b).

This kit contains all the pieces required to produce an Cadian Command Squad
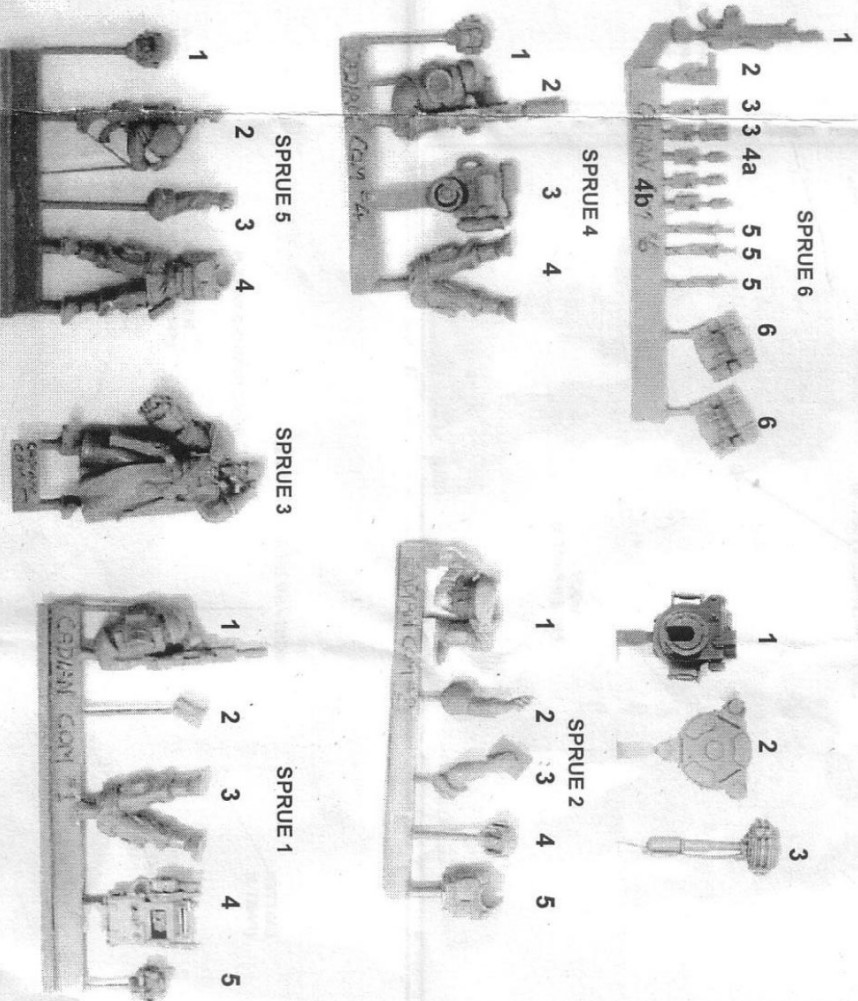

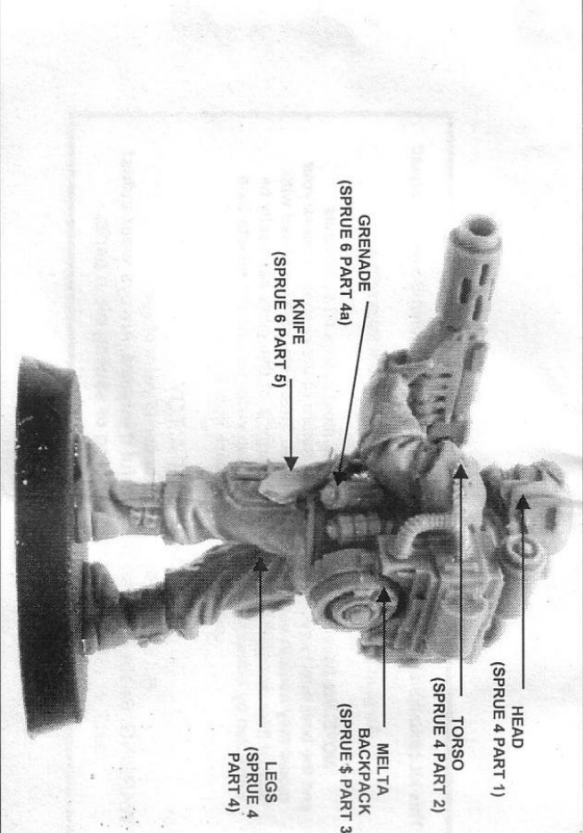

To glue the resin pieces together use Citadel Super Glue.

NOTE: We have cast this kit using the most advanced techniques and the best quality resin, but due to the nature of the casting process your model may contain very slight air bubbles. These can easily be filled with model filler or super glue. Any slight warpage of thin parts can easily be corrected by immersing the part in hot tap water for about 1 minute then carefully bending it back into shape.

THIS IS NOT A TOY

Not suitable for children under 15 years of age.

WARNING: Resin dust can be harmful if inhaled. Always wear a dust mask or respirator when sanding or sawing resin parts.
