LEGION ARQUITOR BOMBARD WITH SPICULA ROCKET SYSTEM

The Legion Arquitor pattern Bombard is a heavy artillery platform designed to operate at the forefront of a Legiones Astartes advance. Equipped with a reinforced chassis and brutal short range firepower, it is called upon to break the most stubborn of fortifications or to annihilate massed enemy infantry and armour. The heavy weapons most often carried by the indomitable Arquitor Bombard are more than capable of removing any obstacle to the advance of a Space Marine host in a series of devastating explosions.

THIS IS NOT A TOY

Not suitable for children under 15 years of age.

WARNING: Resin dust can be harmful if inhaled. Always wear a dust mask or respirator when sanding or sawing resin parts.

Preparing the Model for Assembly

Before assembling the model, wash each part thoroughly with an abrasive brush, such as a toothbrush, to remove any model release agent that may still be on the surface of the parts. Then, remove any excess resin such as mould lines, casting gates, vents and shims. For a more detailed guide to working with resin models, go to the Downloads section of the Forge World website.

This kit contains all the pieces required to construct the Legion Arquitor Bombard with Spicula Rocket System. To glue the resin pieces together, use Citadel Super Glue.

NOTE: We have cast this kit using advanced techniques and the best quality resin, but due to the nature of the casting process, your model may contain small air bubbles. These can easily be filled with model filler or super glue. Any slight warpage of thin parts can be corrected by immersing the part in hot water for about 1 minute, then bending it back into shape.

19

20

The Legion Arqitor Bombard comes with a choice of either Autocannon or Heavy Bolter Sponson weapons. Skip to stage 22 if you wish to build the Heavy Bolter Sponsons.

The Targeter and the Autocannon Power Cable should be glued into the body of the Autocannon Assembly. Avoid getting glue onto the Sponson Turret itself so the weapon will traverse.

21

22

Repeat stages 19 to 21 for the right Autocannon Sponson Turret using part 28. Right Autocannon.

23

 Repeat stages 22 and 23 for 30. Right Heavy Bolter.

24

 Attach via 23. Sponson Mount only. This should allow 21. Sponson Hub to spin, enabling the sponson weapon to elevate and depress.
