This kit contains all the pieces required to build this Vorax Battle-Automata.

To glue the resin pieces together and to plastic kit parts use Citadel Super Glue.

NOTE: We have cast this kit using the most advanced techniques and the best quality resin, but due to the nature of the casting process your model may contain very slight air bubbles. These can easily be fixed with model filler or super glue. Any slight warpage of thin parts can easily be corrected by immersing the part in hot tap water for about 1 minute then carefully bending it back into shape.

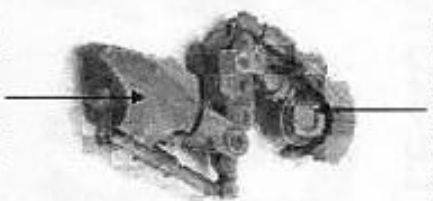

THIS IS NOT A TOY

Not suitable for children under 15 years of age.

WARNING: Resin dust can be harmful if inhaled. Always wear a dust mask or respirator when sanding or sawing resin parts.

7. Lower Leg 1

8. Lower Leg 2

13. Foot Plate

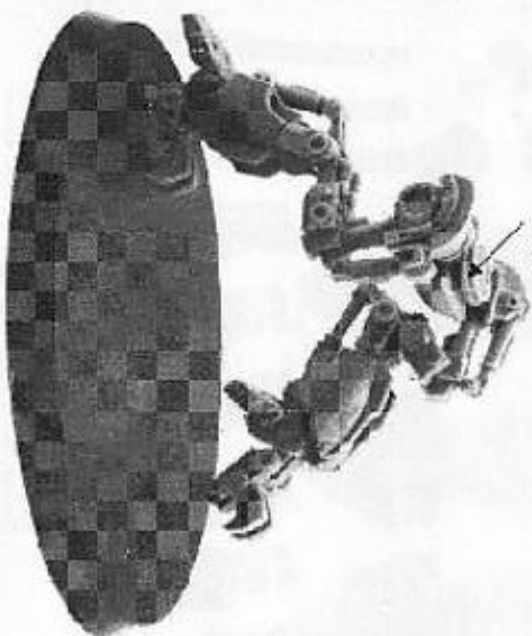

14. Foot 1

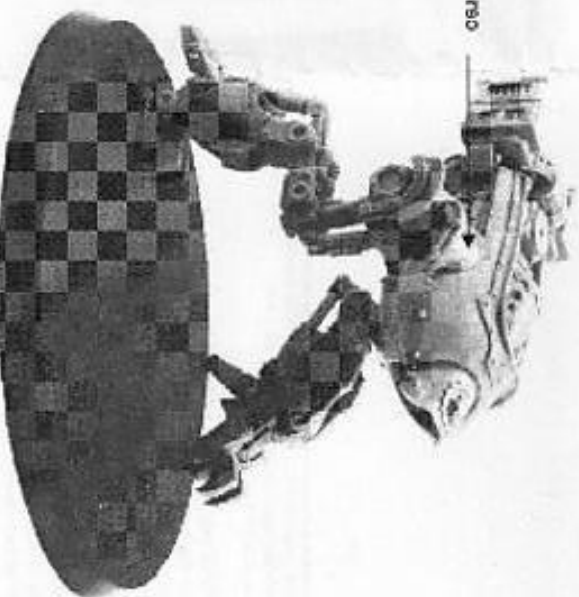

17. Foot 2

The leg components on the Vorex are completely interchangeable between sets. The feet and lower legs can be used either left or right, while the upper legs are sided. This allows a great many poses to be achieved with a little experimentation. The examples shown in these instructions use the sets as numbered.

34. Ammo Feed

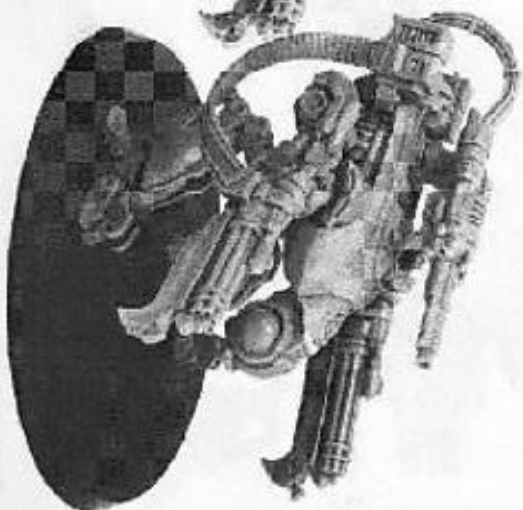

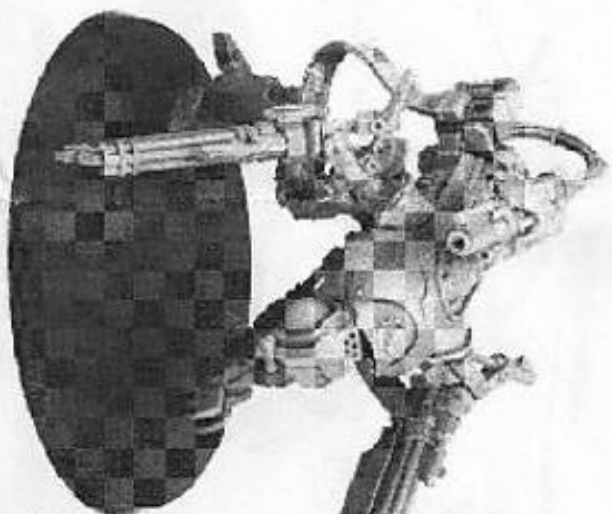

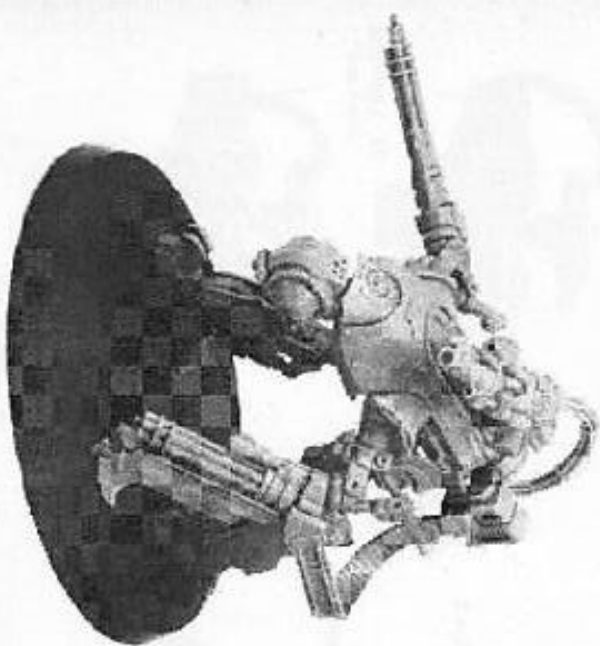

First time heat is applied

Second time heat is applied

* The power and ammo feeds need heat bending to fit. Attach one end to the model and carefully apply heat using either a hair-dryer or submerging in hot water, once the part is pliable bend it to fit, holding in place until cool. There should still be enough flex in the part to apply glue. Once both ends are attached, applying a little heat again will allow it to take a more natural curve.

27. Irad Cleanser

28. Irad Power Focd
